**1. Abstract**

A Dietary & Nutrition Planner is a digital system designed to help individuals maintain a healthy lifestyle by providing personalized diet plans based on their age, gender, health conditions, and fitness goals. With the increasing prevalence of lifestyle-related health issues such as obesity, diabetes, and malnutrition, there is a growing need for smart tools that can guide users toward balanced nutrition.

This system allows users to input personal details such as weight, height, activity level, dietary preferences, and medical conditions. Based on this information, the application generates customized meal plans that meet daily nutritional requirements, including calories, proteins, carbohydrates, fats, vitamins, and minerals. It may also include features such as calorie tracking, water intake monitoring, and reminders for meals. Advanced versions of the planner can integrate technologies like artificial intelligence to recommend adaptive diet plans, analyze eating patterns, and suggest healthier alternatives. Additionally, the system can include a database of foods with nutritional values and provide visual reports to track progress over time.

The primary objective of the Dietary & Nutrition Planner is to promote healthy eating habits, prevent nutritional deficiencies, and support users in achieving their health and fitness goals efficiently and conveniently.

**2. Module Mapping**

| <b>Module Name</b>                                      | <b>Assigned Roll Number(s) Signature</b> |
|---------------------------------------------------------|------------------------------------------|
| User Registration & Login System                        | 2520030229                               |
| User Profile & Health Data Input (weight, height, etc.) | 2520030221                               |
| Diet Plan Generator (logic + rules)                     | 2520030229                               |
| Food Database & Nutritional Values                      | 2520030221                               |
| Progress Tracking & Reports (charts, history)           | 2520030229, 2520030221                   |

### 3. Module Details

#### Team Lead – K. Sanjana (2520030229)

- Designed overall system architecture and UI layout
- Developed user authentication (login/register) module
- Implemented diet plan generation logic based on user inputs
- Worked on progress tracking and report visualization

#### Team Member – I. Aswika (2520030221)

- Developed user profile and health data input forms
- Created and managed food database with nutritional values
- Integrated calorie tracking and meal suggestions
- Assisted in frontend design and testing

### 4. Frameworks / Platforms / Software Used

- **Frontend:** HTML5, CSS3, JavaScript
- **Framework:** React.js
- **Backend:** Node.js / Express.js (*or mention if not using backend*)
- **Database:** MongoDB / MySQL
- **Tools:** VS Code, GitHub
- **APIs (optional):** Nutrition APIs (like calorie/nutrient data)
- **Design Tools:** Figma / Canva
